THE **HARMONY**
OF **COLOUR** SERIES

B O O K F O R T Y T H R E E

JURASSIC PLANET

Stressed out at work? Are the pressures of the world getting you down? We guarantee relaxation with these complex Zen and anti-stress colouring pages for adults.

Harmony of Colour Book Forty Three: Jurassic Planet offers detailed images and patterns that are chosen by experts for their soothing properties.

Be aware of the overall harmony of your colouring rather than focusing on each element individually. Try to balance the colours so that they are a reflection of your emotions of the moment. If the colours of your page are in harmony, then your mind will follow!

Now... grab your pencils or textas and de-stress...

“Did not learned men, too, hold,
till within the last twenty-five
years, that a flying dragon was
an impossible monster? And
do we not now know that there
are hundreds of them found
fossil up and down the world?
People call them Pterodactyles:
but that is only because they
are ashamed to call them flying
dragons, after denying so long
that flying dragons could exist.”

“An asteroid or a supervolcano could certainly destroy us, but we also face risks the dinosaurs never saw: An engineered virus, nuclear war, inadvertent creation of a micro black hole, or some as-yet-unknown technology could spell the end of us.”

— Elon Musk —

“Books are sharks... because sharks have been around for a very long time. There were sharks before there were dinosaurs, and the reason sharks are still in the ocean is that nothing is better at being a shark than a shark.”

— Douglas Adams —

“Asteroids have us in their sight. The dinosaurs didn’t have a space program, so they’re not here to talk about this problem. We are, and we have the power to do something about it. I don’t want to be the embarrassment of the galaxy, to have had the power to deflect an asteroid, and then not, and end up going extinct.”

— Neil deGrasse Tyson —

“It’s very simple why kids are crazy about dinosaurs – dinosaurs are nature’s special effects. They are the only real dragons. Kids love dragons. It’s not just being weirdly shaped and being able to eat Buicks. It’s that they are real.”

“The great extinction that wiped out all of the dinosaurs, large and small, in all parts of the world, and at the same time brought to an end various lines of reptilian evolution, was one of the outstanding events in the history of life and in the history of the earth. It was an event that has defied all attempts at a satisfactory explanation.”

“The dinosaurs disappeared
because they could not
adapt to their changing
environment. We shall
disappear if we cannot
adapt to an environment
that now contains
spaceships, computers
— and thermonuclear
weapons.”

“The public image of dinosaurs is tainted by extinction. It’s hard to accept dinosaurs as a success when they are all dead. But the fact of ultimate extinction should not make us overlook the absolutely unsurpassed role dinosaurs played in the history of life.”

“Dinosaurs are the uncontested stars of paleontology. Given their often spectacular morphology and extinction (or, rather, partial extinction--as birds are dinosaurs), when the Earth was struck by an enormous meteorite and immense volcanic eruptions shook the globe, they hog the limelight to such a degree that we often forget that before them there were other animals.”

“A caveman took a shell,
and maybe it had a hole
in it, or maybe he put a
hole in it, and he put it
on a piece of a tail of a
donkey or a dinosaur or
something and gave it to
the cavewoman. She put it
around her neck - the first
jewel.”

“Suddenly, we are putting ourselves as the next dinosaurs. It’s rather dark; we have narrowed our dreams. It is time to restore our visions. And so it’s not a nostalgic idea; it is based with this unconscious need to restore a kind of dynamic for tomorrow.”

“Certainly what happened to the dinosaurs was not good - that was a terrible day for the dinosaurs, very sad. But I have to say, there are a lot of threats we face as people and, as someone who lives in Los Angeles, I’m personally more likely to die from driving on the freeway than I am from an asteroid, so you have to put that risk in perspective.”

“The brontosaurus had a thirty-ton body and a two-ounce brain. The anatosaurus had two thousand teeth. Triceratops had a helmet of filled bone seven feet long. Tyrannosaurus rex had tiny arms and teeth like six-inch razors and it was elected President. It ate everything—dead meat, living meat, old bones—”

“When we were kids the coolest dinosaur in the world was the brontosaurus, which means ‘thunder lizard’. But it turns out brontosaurus isn’t even a thing, it’s just an apatosaurus which means ‘deceptive lizard’, which isn’t nearly as cool. I don’t want my gigantic lizards to bring the lies. I want them to bring the thunder.”

The cost of our success is the exhaustion of natural resources, leading to energy crises, climate change, pollution, and the destruction of our habitat. If you exhaust natural resources, there will be nothing left for your children. If we continue in the same direction, humankind is headed for some frightful ordeals, if not extinction.

Biological diversity
is messy. It walks, it
crawls, it swims, it
swoops, it buzzes. But
extinction is silent,
and it has no voice
other than our own.

“It’s hard for us to imagine, as humans, that we’ll become less powerful. But it’ll be healthier for the planet and for the ecosystem if that does happen. If humans are going to merge with machines, then let’s get on with it. I love humans, but I also love dinosaurs - I’m pretty sure I wouldn’t have wanted them to die out, either.”
